

Hello, and thank you for buying our model and animation set!

Please note that there are several animations have additional versions that are broken up into start, loop, and end animations and are not displayed in the demo scene. These are:

HorrorMaiden_AttackChokeFirstPCamera, HorrorMaiden_Idle_CreepyDance01, HorrorMaiden_Idle_CradleBaby, and HorrorMaiden_SlitherOnFloor. This allows you to adjust the total length of the animations to suit your needs.

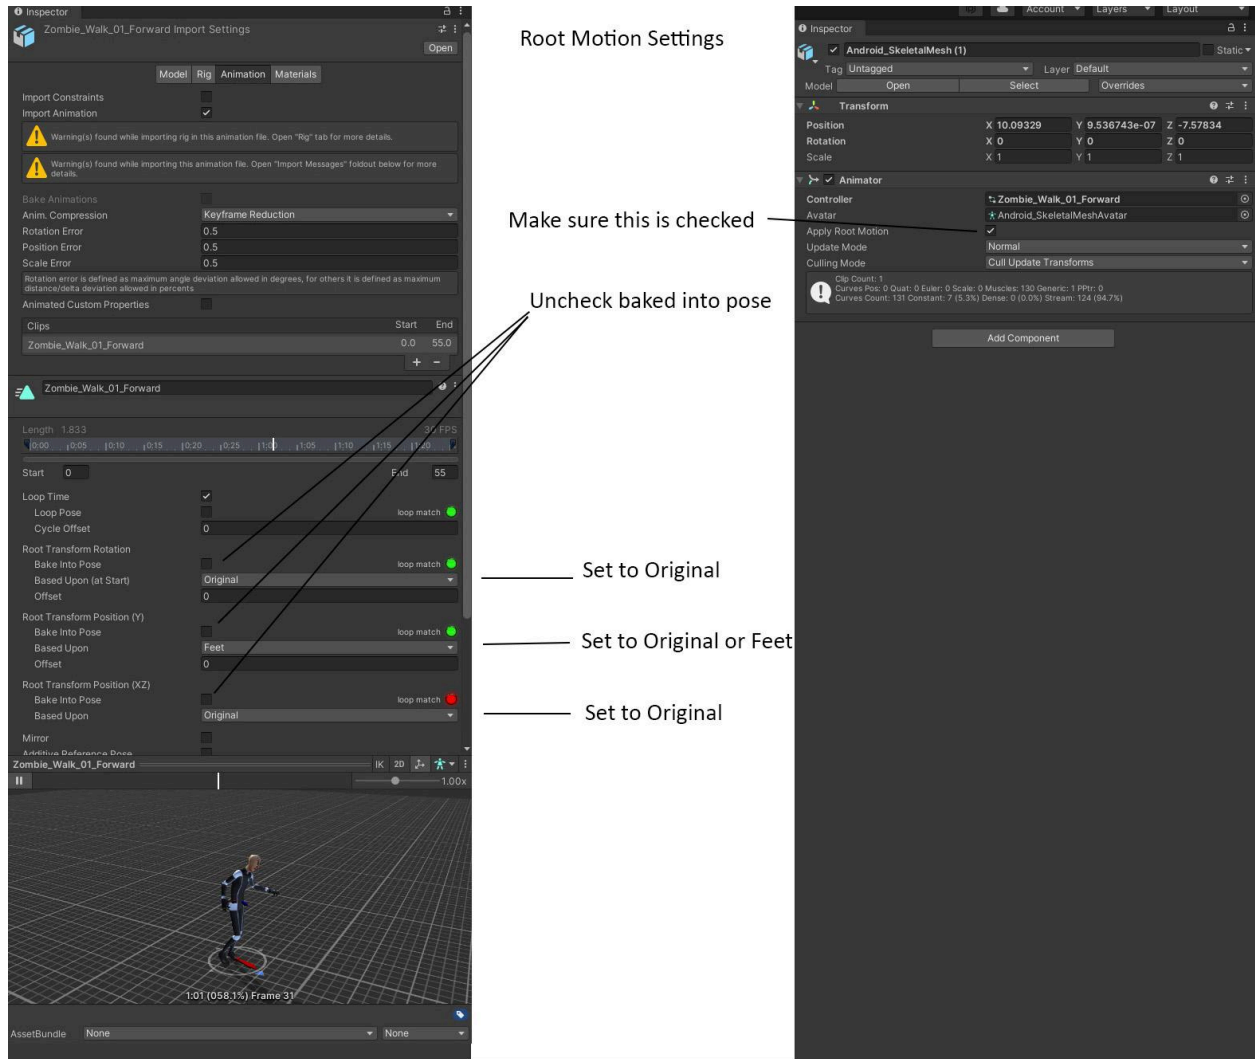

Some animations in this pack were altered to work in Unity compared to our other releases. Specifically, some of the broken neck01 and 02 movement set animations needed the arm placement adjusted to prevent glitching.

If you have trouble setting up the animations, you can email us at ramsterzart@gmail.com, but check out the information below to see if it answers your questions.

Q: How do I use root motion?

OR the animation is looping in place, how do I fix it?

A: Uncheck "Bake into pose" in the animation settings and make sure "use root motion" is checked for the character.

Or, You can just select “root” from the “root motion node” drop down menu under the “Motion” section in the animation settings

Anim. CompressionOptimal

Rotation Error0.5

Position Error0.5

Scale Error0.5

Rotation error is defined as maximum angle deviation allowed in degrees, for others it is defined as maximum distance/delta deviation allowed in percents

You may need to make adjustments to the animation settings depending on your specific needs, but these settings should generally work.

Q: How do I use the animations in place?

A: You can adjust the settings as follows: check “bake into pose” for root transform rotation and root transform position (y). Uncheck it for Root Transform Position (XZ).
